

Borders

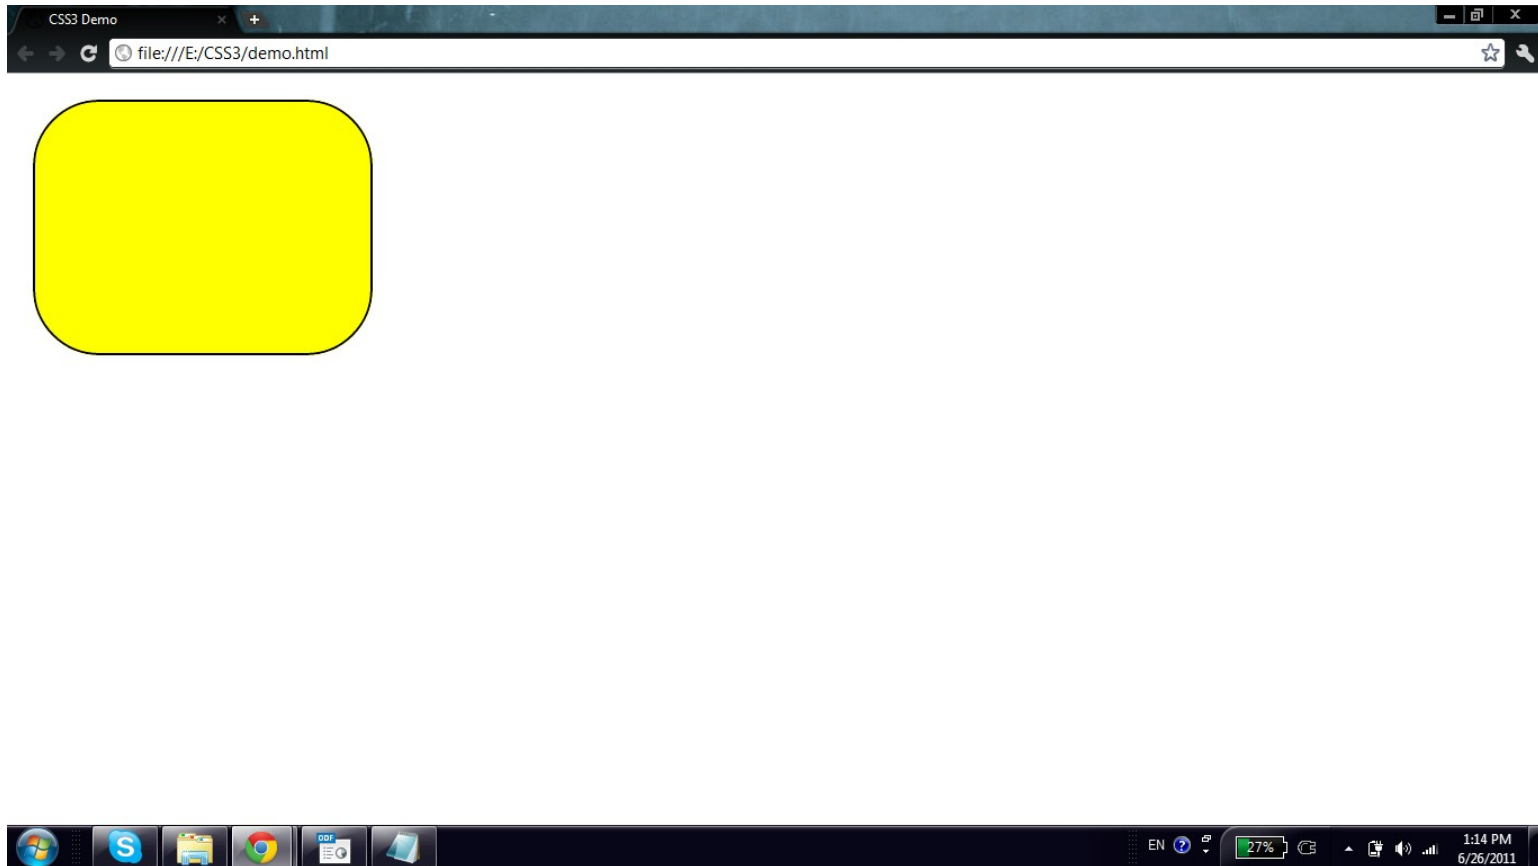

Rounded Corners

- ❖ CSS3 allows us to specify rounded corners for our boarder. We no longer in a need for using small images in order to get the effect of a rounded boarder.

Rounded Corners

```
<html>
  <head>
    <title>CSS3 Demo</title>
    <style type="text/css">
      div#something
      {
        width:100px;
        height:75px;
        background-color:yellow;
        border:1px solid black;
        border-radius:20px
      }
    </style>
  </head>
  <body>
    <div id="something"></div>
  </body>
</html>
```

Rounded Corners

Shadow

- ❖ CSS3 allows us to add shadow to the boarder we draw.

Shadow

```
<html>
  <head>
    <title>CSS3 Demo</title>
    <style type="text/css">
      div#something
      {
        width:100px;
        height:80px;
        background-color:yellow;
        box-shadow: 20px 10px 5px #999999;
        border:1px solid black;
        border-radius:20px
      }
    </style>
  </head>
  <body>
    <div id="something"></div>
  </body>
</html>
```

Shadow
