

Texts

The `text-shadow` Property

- ❖ We can use this new property in order to add shadow to the text.

The text-shadow Property

```
<html>
  <head>
    <title>CSS3 Demo</title>
    <style type="text/css">
      div#something
      {
        text-shadow: 4px 4px 4px #FF4444;
      }
    </style>
  </head>
  <body>
    <div id="something">bla bla bla</div>
  </body>
</html>
```

The text-shadow Property

bla bla bla

The `word-wrap` Property

- ❖ When a word is too long it might exceed the text boundaries. We can prevent that using the `word-wrap` property assigned with the `break-word` value.

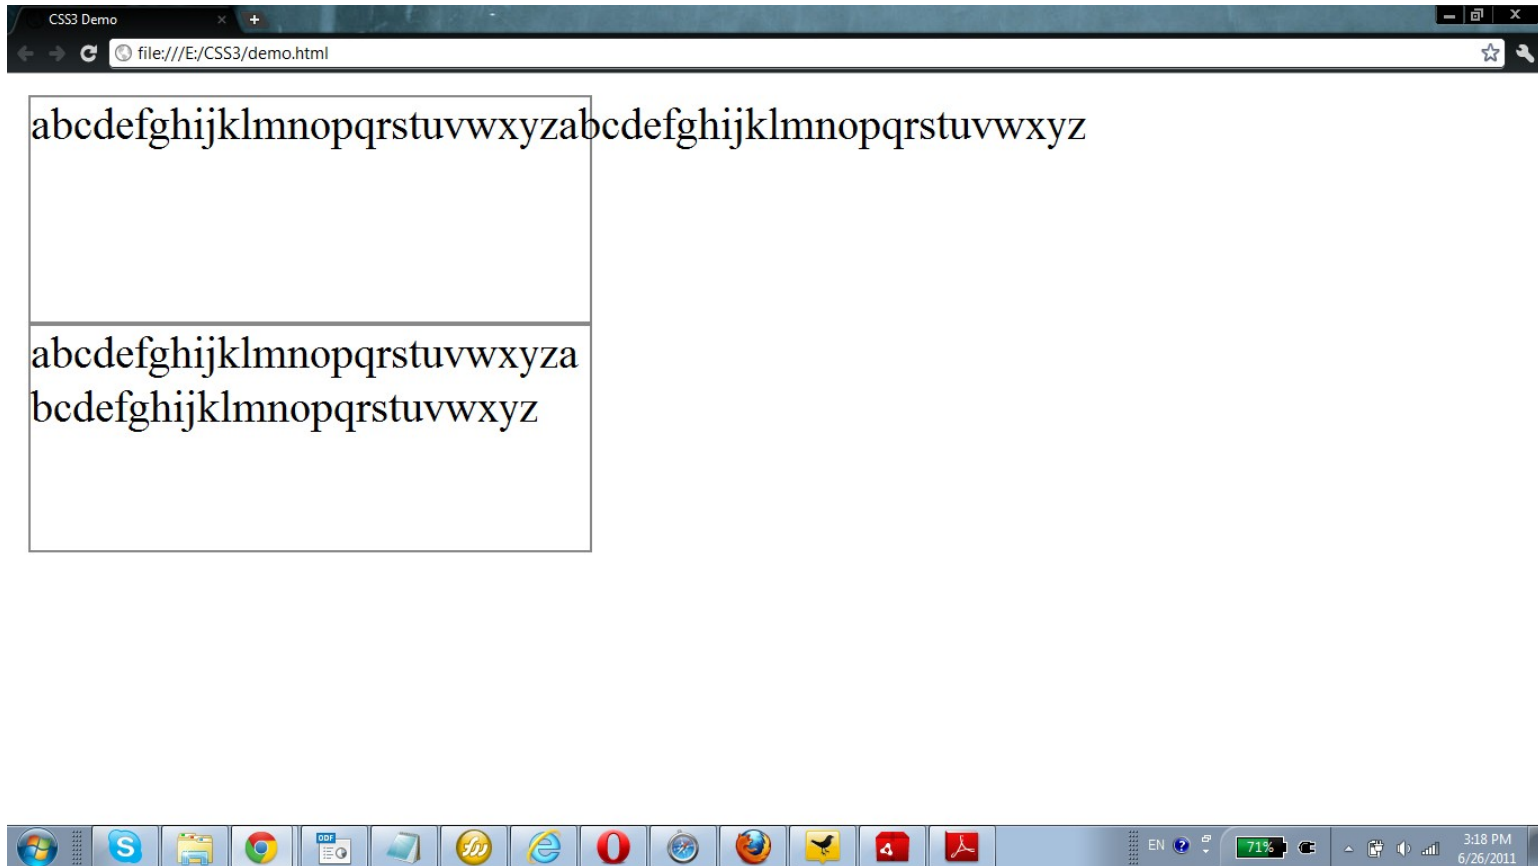

The word-wrap Property

```
<html>
  <head>
    <title>CSS3 Demo</title>
    <style type="text/css">
      div#break
      {
        width: 200px;
        height:80px;
        border:1px solid #888888;
        word-wrap:break-word;
      }
      div#nobreak
      {
        width: 200px;
        height:80px;
        border:1px solid #888888;
      }
    </style>
  </head>
```

The word-wrap Property

```
<body>
  <div id="nobreak">
    abcdefghijklmnopqrstuvwxyzabcdefghijklmnopqrstuvwxyz
  </div>
  <div id="break">
    abcdefghijklmnopqrstuvwxyzabcdefghijklmnopqrstuvwxyz
  </div>
</body>
</html>
```
