Git Logs

Introduction

❖ Git provides us with various features related to the log
  messages we can get.

Git Logs Search

❖ Using the --`grep` parameter assigned with the text we search

we will get all log messages their comments include that text.

```
git log --grep="hello"
```

Git Logs Time Duration

❖ When getting log messages we can specify the since date and the until date. We shall get just those log messages that fall in between the two.

```
git log --since=2010-01-22 --until=2011-02-18
```

Short Logs

❖ Using the `shortlog` command we can get the short version of each log.

```
git shortlog
```

Skip Logs

❖ Using the `skip` parameter we can specify the number of logs
we want to skip when getting a list of all logs.

```
git log --skip=22
```
