

# Control Structures

# Introduction

- ❖ The Scala programming language allows us to create our own control structures.
- ❖ The simplest approach for creating a new control structure would be defining a new function.

# Code Sample

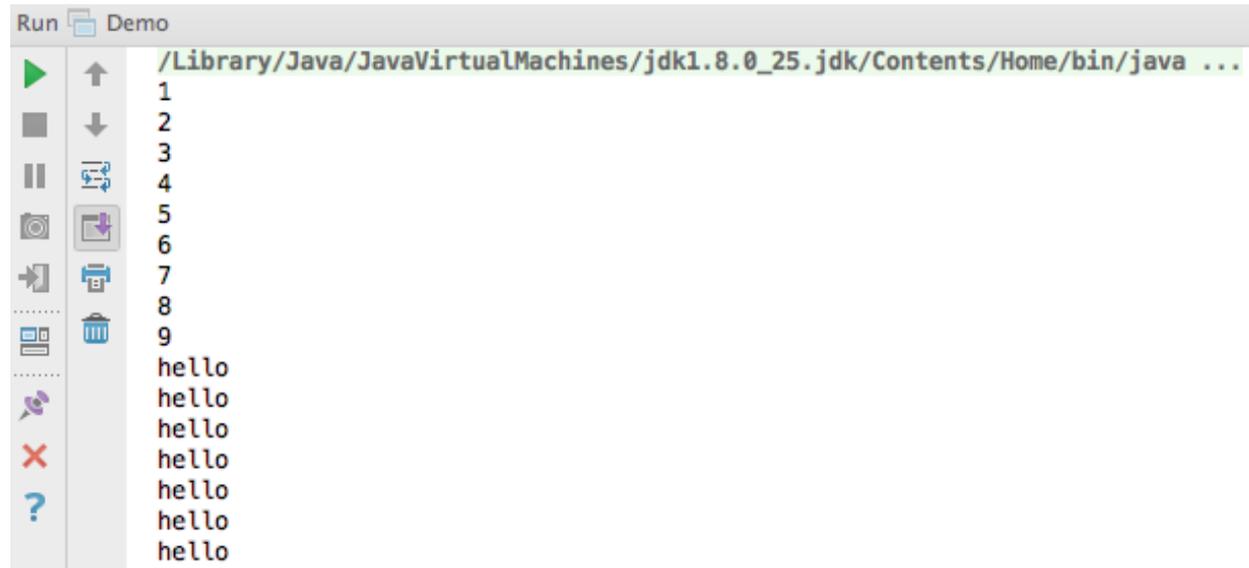

```
import MyControlStructures._

object Demo
{
  def main(array: Array[String])
  {
    var i = 1
    loop(i<10) {
      println(i)
      i = i+1
    }
    simplefor(7) {
      println("hello")
    }
  }
}
```

# Code Sample

```
object MyControlStructures {
  def loop(condition: => Boolean) (code: => Unit) {
    if (condition) {
      code
      loop(condition) (code)
    }
  }
  def simplefor(loops: => Int) (code: => Unit) {
    if(loops>0) {
      code
      simplefor(loops - 1) (code)
    }
  }
}
```

# Code Sample

```
Run Demo
/Library/Java/JavaVirtualMachines/jdk1.8.0_25.jdk/Contents/Home/bin/java ...
